FALL 1918

STRAWBERRY PLANTS

FRUIT TREES, ETC

= FROM =

LTURAL AND POMOLOGICA

MCEIVED

LEAMON G. TINGLE

PITTSVILLE, MD.

U. S. Department of Agriculture.

Strawberries sold this last season for the highest prices that I have ever known them to. Other fruits are also selling high with more demand for them at these high prices than usually at much lower prices. The consumer is getting big money for his labor and is used to paying high prices for the goods he buys and can well afford to do so. Last June my late berries averaged a little over 21 cents per quart, right here at our shipping station, for the entire crop; my Fall-bearing sorts are now selling for 30 cents per quart wholesale in Baltimore, which is about 26 cents per quart here and I have sold my entire crop of Fall-bearers at this price. There's money in growing strawberries at these prices, even with the high cost of labor and materials and I would advise you to plant all you can well till and harvest.

There were not one-half as many berries grown this past season as there were the previous season and I do not believe there will be more than one-half as many next season as there were this. The reports that I get from all over the country say there were but a very few plants set last spring and I know that is so here. Pittsville is one of the largest strawberry shipping stations in the country and there were hardly any new patches set last spring; this being the case all over the country, berries cannot help but sell well for at least the next two years. Considering this I would advise you to set some plants this season if you have the labor to till and harvest them. I do not see how they can possibly sell for less than they did this season and it looks to me that they will even go higher.

I am asking a little more for some varieties of plants this fall than I did last spring but have not advanced the prices as much as other things have advanced; everything concerned in the growing, digging, packing, etc. of nursery stock has advanced enormously and does not seem to know where to stop. Taking all this into consideration, I am sure you will agree with me that these prices are as reasonable as you could expect them. I have a nice stock of plants for this fall and next spring digging. While most other growers decreased their acreage last season, I expect to have nearly twice as many plants to dig this fall and spring as I did last. I will certainly appreciate your order and am sure you will be much pleased with the stock I send you.

All plants are carefully packed with damp moss and delivered at our shipping station at the prices quoted herein. After delivering to the forwarders all articles are entirely at the risk of the purchaser; and if any loss or delay occurs, the forwarders alone must be held responsible.

Price List of Strawberry Plants

I begin shipping about October 1st, sometimes little earlier.

These prices cancel all previous prices and quotations.

September Prices of Strawberry Plants

If you want your Strawberry Plants in September add to the above prices as follows: 5 cents on each 25, 15 cents on each 100, 30 cents on each 250, 55 cents on each 500, \$1.00 on each 1,000.

Fall-Bearing Strawberries

Another year has proven that fall-bearing strawberries are the most valuable addition to the strawberry world that has ever been known. All over the country people are beginning to realize their possibilities, and those who a year or two ago were skeptical are now enthusiastic.

Remember, you take no chances in planting these berries, for they are a proven success, and while the price that can be had for the fruit may not always be as high as it is now, still it will be years before they are so exten-

sively planted that there will not be big money in growing them.

The price of fall-bearing plants is so reasonable that you cannot afford to be without them. Outside of the labor of keeping the blossoms off the first year, their care is no different than that given the spring sorts, and the returns they will give you the first year alone will be worth ten times the money and labor expended on them.

Clipping from the January 1918 Issue of Farm Journal

About April 25 we set 10,000 everbearing strawberry plants, 7,000 the usual way, eighteen inches by four feet, and the balance (3,000) in hills one foot by twenty-six inches. First named, Progressive; last, Superb. We left all runners alone on the Progressive, and cut off all runners on the Superb. Pinched off all blossoms and buds till about July 10. In a few days the plants were white with bloom and some of the young plants bloomed before they took root. About August 1 we commenced to pick a few quarts of berries, and all through September we averaged ten thirty-two-quart crates per week. From October 1 up to October 12, the young plants were full of bloom and green berries and a sight to behold. We picked more than eighty bushels in all. We are greatly pleased with these everbearers, and we expect to set at least 50,000 next April and May, 1918, and all will be in hills and entirely of the Progressive variety.

C. Stauffer, Ohio.
